

Azure VMware Solutions

Run your native VMware workloads in Azure

Modernize with Cloud Innovation

Azure VMware Solution (AVS) is an Azure service to redeploy and extend your VMware-based enterprise workloads to Azure. We provide the management systems, networking services, operating platform and back-end infrastructure operations required to run native VMware environments at scale in Azure. Innovate with Azure's capabilities, scale and economics. Reuse your existing VMware tools and skills to manage your workloads on Azure without disrupting any network, security or data protection policies. Focus on creating business value while reducing costs.

Realize Significant Cost Savings VS. On-Premises

Reduce costs with innovative savings programs that are only available on Azure. Save money with managed infrastructure and expand or shrink your environment on demand as your business needs change. Lower your costs with monthly consumption pricing by reusing your existing on-premises licenses for Windows Server and SQL Server on Azure with Azure Hybrid Benefit, and by purchasing your compute resources in advance with reservation pricing.

Get **three more years of security updates** for your Windows and SQL Server 2008 and 2008 R2 workloads by taking advantage of extended security update offers.

 The security updates would cost you an additional 75% of license price, if these workloads are deployed on-premises or on other clouds.

 <p>Get scale, automation, and fast provisioning for your VMware workloads on global Azure infrastructure</p>	 <p>Keep using your existing VMware investments, skills, and tools, including VMware vSphere, vSAN, and vCenter</p>	 <p>Modernize your VMware workloads by integrating with native Azure services such as Azure Active Directory, AI and Analytics</p>	 <p>Confidently use Azure VMware Solutions knowing that they're first-party Microsoft offerings backed by VMware</p>	 <p>Major cost reductions for Windows Server and SQL Server with and Extended Security updates in addition to reservation discounts (for both Linux and Windows)</p>
 <p>Azure native services integration Connect to Azure services endpoints Leverage Azure Active Directory as VMware vCenter SSO identity source.</p>	 <p>vSphere network full compatibility Full compatibility with both NSX SDN architectures as well as traditional vSphere networking</p>	 <p>Elevated Privileges mode (root access) Self-service - Just in time admin access to vCenter (management) to enable wide ecosystem tool compatibility</p>		 <p>Unified Management Single pane of glass to manage vSphere-based and Azure native VMs, with uniform identities, access control and monitoring.</p>

Working With A Microsoft Partner: The AsiaPac Advantage

As the official launch partner for Azure VMware solutions (AVS), customers can assure full support from us. Our long-term partnership with Microsoft and the value added managed services and technical support we provide to our customers ensures an all rounded integrated hybrid solution.

AsiaPac is a leader in providing managed infrastructure, cloud and enterprise computing solutions with 28 years of ICT expertise. We are committed to driving business transformation. Highly acclaimed for our Enterprise Systems Services and Cloud Computing, AsiaPac has excellent references in implementing and on-boarding key government and commercial hybrid-cloud projects.

 AsiaPac was awarded the Hybrid Cloud and Infrastructure Platform Partner of the Year in Year 2017.

Unified Management Solution by AsiaPac

Combining VMware's leading-edge Software-Defined Data Center (SDDC) capabilities with the flexibility and depth of Microsoft Azure's infrastructure and services offerings, this hybrid cloud service is the perfect fit for today's applications.

Contact Us for More Azure VMware Discussions

Find out how you can seamlessly integrate your on-premises environments to Azure without the cost, effort or risk of re-architecting applications or retooling operations.
